

# Individual Reflection Week 5

This week was a lot better than last week in terms of stress and workload. The user stories were split evenly and had about the same amount of work per user stories. We had quite a lot of work in a parallel course so keeping the amount of work down this week was a must.

I was working with android studio a lot this week and definitely understand more than last week. I want to know android architecture and how to implement it. To do this I need to read up on how android architecture and how it is implemented into a system.

We have currently been updating Github while we work and it is working well. As a team we resolve merge conflicts and i think everyone has a good understanding of how it works. There really isn't anything broad left to teach the rest of my team. One possibility is specific android libraries.

The Scrum board is being updated like last week but this week we did in fact split the user stories evenly and made the user stories a decent size. We were more careful and more precise which led to a better work environment this week. I would like to have better testing in the future and to do this we need to talk as a team on what needs to be done.

Like last week I have been coding a lot but also helping out with coding, double checking my teammates code and discussing solutions. The workload was just perfect as well. In the future I would like to work on the design. To do this I need to take it up with the team and propose my idea.
