

- **What do I want to learn or understand better?**

A:

Since this is the beginning of the project i currently only have the experience from earlier courses

B:

I want to be able to learn how to successfully make this project work

A → B:

For the moment just follow the course material and work together with the group

- **How can I help someone else, or the entire team, to learn something new?**

A:

There is currently a knowledge gap between the I students and IT students in some areas like GitHub

B:

All students in this project can work on a equal knowledge level on things such as GitHub

A → B:

Teach the I students on how to use GitHub efficiently so that work friction is reduced.

- **What is my contribution towards the team's use of Scrum?**

A:

We currently have not started with a Scrum (currently a bit uncertain of what it means)

B:

Use Scrum efficiently (Maybe Jira or something like that)

A → B:

Follow the course material to understand this concept better

- **What is my contribution towards the team's deliveries?**

A:

We have currently submitted our Social Contract and set up a Repo

B:

Continue to submit the necessary part each week as well as work on the project

$A \rightarrow B$ :

Do my part on the project (yet to be decided) and the weekly requirements.

- **The first week of the course you describe the current situation by motivating a learning objective.**

Currently we have written our social contract and begun to set up our repo. We haven't decided on an idea yet but we have multiple ideas that can be used. My learning objective right now is to learn how to follow an agile project structure. I'm starting to understand some basic stuff but I still got a long way to go.
