

- **What do I want to learn or understand better?**

We're now at the end of our project and I currently feel satisfied with my current knowledge level. Now that the final presentation is done, all we have left is to finish up the final team reflection as well as some small parts with the code. So my focus is going to be on how to do the final reflection, and for that I'm gonna need to read the instructions and then do the work with my team. A problem that could arise is that I have a final exam on the 5 / 6 - 21 so that takes a bit of a priority. It should be fine if I down-prioritize this as the I students have said that they can focus mainly on the final reflection as they have no exams left after this reflection.

- **How can I help someone else, or the entire team, to learn something new?**

The best way that I can currently help my team is by helping my teammates in general. If they have a question I can try answering to the best of my knowledge or I can try to do research for them to try to find a correct answer. This also helps me in a way as I also get a bit more knowledgeable. By doing this I help elevate our knowledge as a team and this can hopefully help during future development.

- **What is my contribution towards the team's use of Scrum?**

This week I've been focusing on cleaning up the leftover tasks in our scrum board, polishing up some details in our application and I worked a bit on our final presentation. I've been hosting our group meetings and I've taken an active part in them. I have delivered the work that was expected of me. I updated the KPI at the end of the sprint since I had to put my focus elsewhere.

We still have a small amount of work left in our scrum board so this week I'm going to be focused on working on those tasks / user stories. This includes work on the final reflection.

- **What is my contribution towards the team's deliveries?**

As mentioned before, this sprint has been more or less cleanup on my part. As I've added, changed and removed multiple small parts of our code.

I'm going to continue on doing this even now after this final sprint as we still have some small things that need to be done. A professional has standards y'know? 🙄

To finish this goal we as a team have to work together to find what loose ends need to be tied up and fixed. My part comes in to do the parts that are assigned to me.
