

- **What do I want to learn or understand better?**

I want to get better at using android studio to develop our application. Currently I have gotten a bit better at it with implementing different functions. However I want to be able to do more. For the tasks I have ahead of me this week I need to learn new things to be able to get them to work. This is a good challenge for me as I believe this will help me get closer to my goal.

- **How can I help someone else, or the entire team, to learn something new?**

In my opinion we are all in the same dark room right now. So the best I can do to help my team is to research with/for them and then present it. At the end of the sprint I can present my work to try to make the rest of my team understand what I've done so that they can understand as well.

- **What is my contribution towards the team's use of Scrum?**

At the beginning of this sprint, our team decided on which User Stories to focus on this week as well as divide them up into tasks. Since we had to make some changes to our project scope most of this week were spent on meetings and not actual programming. I do believe that this was necessary in the long end. I took an active part in all steps of the way to help my team.

- **What is my contribution towards the team's deliveries?**

This week I worked on updating the mockup as well as helped on creating the sports and committee interface/functionality. Since this was the first sprint we set out with not as much work so that we can ramp it up under the future sprints. I also took active parts in all of our meetings so that we would be able to get closer to our goal.
