

Individual Reflection Week 1

I don't really have much experience with working with the agile way of working and I have for the most part always worked by myself so working with a team is a new experience. I want to be able to work in parallel with my teammates with relatively good flow. To do this i need to actively try to communicate with team members, document my ideas, findings and just overall work together with my comrades.

Not much is happening right now but in the future i would like to be able to help my team with my IT knowledge of code and github. To do this I have to speak with my team and find out what everyone is good at, but also tell my group what I am strong at and play to my strengths.

We have not started with scrum yet but in the future i would like to build good user stories, epics and tasks with clear definitions of done but also spread out the workload to the team. To do this I have to communicate with the group on what needs to be done in our project and what priorities we have.

We don't have anything to deliver at the moment but i would like to focus on the github repo but also code quality and dynamic programming. To achieve this we will have to plan and discuss the code before coding and have quality checks at some stage.
