DAT257 – IBM System/360

Project scope (version 2.0)

The pandemic has led to a decline in physical activity among students and has made it easy to fall into unhealthy habits. This is a threat to the students' wellbeing which we must address. In collaboration with Chalmers Studentkårs Idrottssällskap (CIS) we will face this threat by developing an Android application.

Our app aims to encourage students to live a healthier and more active life by providing recommendations and easy access to the various sports represented at Chalmers. This will inspire continued exercise and exploration of new sports. When starting the app, the user is asked to answer a few questions about their training habits, preferences and interests. Based on this test the application will provide the user with recommendations for available sports at Chalmers Campus. The app will also offer a possibility to find contact information to the different sport committees and their events.
