Individual Reflection Week 7

We have almost completed all of the functionality on the app. Some group members finished off the last user stories. I worked on bug fixes, design and polishing the app.

My skills have not improved a lot since last week. I have been working with android studio but nothing new. I have been reviewing code and optimizing performance a lot this week. I should continue to do this next week.

There is little I can teach my team. Just like last week we have discussed and I have taught what I know.

I made some tasks and user stories together with the group but I was not actively completing them. I had other work on the app to do. We had 3 user stories this week but all of them were quite small so only one person was assigned to each. Unfortunately we did not implement tests. We will have to do this in the future.

I have been fixing bugs on the quiz but also the design. I made sure the code was decent quality and I also performed optimizations to make the code more stable and run faster. In the future I would like to implement tests. I'm not very good at it, because I don't have much experience, but it shouldn't be that hard.
