- **What do I want to learn or understand better?**

Sort of the same situation as last week. I've reached a new level of understanding Android Studio but I still have a bit to go. This week I'm going to continue to work on the new tasks that I've been assigned to reach a better understanding on how to code in this development environment. As not much has changed from last sprint, this goal stays more or less the same.

- **How can I help someone else, or the entire team, to learn something new?**

The best way that I can currently help my team is by helping my teammates in general. If they have a question I can try answering to the best of my knowledge or I can try to do research for them to try to find a correct answer. This also helps me in a way as I also get a bit more knowledgeable. By doing this I help elevate our knowledge as a team and this can hopefully help during future development.

- **What is my contribution towards the team's use of Scrum?**

During this week I've been taking an active part in all our designated meetings where we either decide on what to do next sprint or we check up on all our work and merge them to our github. I've also since last week kept up with updating the KPI and intend to keep doing so. My goal for the next sprint is to keep doing what I'm currently doing since I feel that I'm doing enough towards our application of scrum.

- **What is my contribution towards the team's deliveries?**

This sprint I've been working together with Simon Larsson and Oscar Forsyth in making a filter on our Sports and Committees part of our application. The filter sorts based on different tags that are connected to each sport. For the next sprint I'm gonna be working on implementing a calendar view for our upcoming events, this is to make it easier to see what activities happen on which day. To finish this goal I'm gonna be doing the tasks that have been set out for us.
