- **What do I want to learn or understand better?**

We're quickly approaching the end of our project and we're starting to slowly switch focus from programming to finishing up the project. So I want to learn what needs to be done for the final presentation as well as the final report. Currently I only have an idea on what needs to be done so during this next sprint I need to study with my group on what needs to be done, as well on my own if necessary but we've set up a good structure so this shouldn't be a problem.

- **How can I help someone else, or the entire team, to learn something new?**

The best way that I can currently help my team is by helping my teammates in general. If they have a question I can try answering to the best of my knowledge or I can try to do research for them to try to find a correct answer. This also helps me in a way as I also get a bit more knowledgeable. By doing this I help elevate our knowledge as a team and this can hopefully help during future development.

- **What is my contribution towards the team's use of Scrum?**

This week I've been traveling so I have not been able to participate to my fullest potential during the meetings. I have been to the meetings that I have been able to go to. Since I didn't have much time to work this last sprint I took upon myself a lesser workload than normally and I have delivered the work that I set out to do during this timeframe. I updated the KPI at the end of the sprint since I had to put my focus elsewhere.

My goal for the last sprint is to try to go back to a normal amount of participation in our use of Scrum, that shouldn't be too hard since I'll be back in Gothenburg by the beginning of the next sprint.

- **What is my contribution towards the team's deliveries?**

This sprint I've been working on my own to update the questions in the quiz so that they match what our external stakeholder wants from it. Since earlier it was a bit all over the place (Not surprising since it was the first iteration).

For the next sprint I'm going to be working on cleaning up the code. Since we're close to the end of our project we've decided on not implementing any new features and trying to clean up the code and any loose ends that we've haven't finished yet.

To finish this goal we as a team have to work together to find what loose ends need to be tied up and fixed. My part comes in to do the parts that are assigned to me.
