- **What do I want to learn or understand better?**

Sort of the same situation as last week. I've reached a new level of understanding Android Studio but I still have a bit to go. This week I'm going to continue to work on the new tasks that I've been assigned to reach a better understanding on how to code in this development environment.

- **How can I help someone else, or the entire team, to learn something new?**

The best way that I can currently help my team is by helping my teammates in general. If they have a question I can try answering to the best of my knowledge or I can try to do research for them to try to find a correct answer. This also helps me in a way as I also get a bit more knowledgeable. By doing this I help elevate our knowledge as a team and this can hopefully help during future development.

- **What is my contribution towards the team's use of Scrum?**

During this week I've been taking an active part in all our designated meetings where we either decide on what to do next sprint or we check up on all our work and merge them to our github. A difference from last week is that I started to update our KPI during the week instead of at the end of the sprint. This is something that I'm gonna continue to do during future sprints as well. So for the next sprint my aim is to continue doing the same thing as this last sprint, since I currently feel that I'm doing enough towards our application of scrum.

- **What is my contribution towards the team's deliveries?**

This sprint I've been working together with Simon Schuster on expanding our Sports and Committees part of our application where we now can see more information about the committees as well as a link button to their respective facebook page. This was the task assigned to us and our team was satisfied with the result. For the next sprint I'm going to be working on implementing a filter for these committees based on different tags that each sport has. To finish this goal we're gonna be doing the tasks that have been set out for us.
