- **What do I want to learn or understand better?**

I want to learn to use Android Studio since we've decided to use this as one of our development tools. I currently know little to nothing about how to use it. But I do plan during Easter to do some exercises for this development tool so that I can learn the ins and outs of it.

- **How can I help someone else, or the entire team, to learn something new?**

I can help others by trying to answer their questions, since the group has different knowledge areas we should be able to help each other when we don't understand something. E.g. IT helped I:students with GitHub and I:students helped IT to understand what a business model canvas is.

- **What is my contribution towards the team's use of Scrum?**

We're currently discussing different applications to use for our Scrum board. From our last lecture on User Stories I got a better mental view of what needs to be done to make a good scrum board. So currently I need to think of good user stories that can be added to our scrum board. We've had discussions about this in our group of what can be a good user story in our case. We will continue this work during the easter.

- **What is my contribution towards the team's deliveries?**

This week me and Oscar J have been doing a short research on which development tool we're going to use. I also participated in working on our team's deliveries such as the Project Scope, Business Model etc. As mentioned under the section 'What do I want to learn or understand better?' I'm going to work on how to use Android Studio and then share this information with our team. Our goal is to have mostly everything admin done before the end of easter holiday (Such as design, user stories, etc) as we want to be able to start development as quickly as possible.
